

## ADRIANA MAVIGNIER

Adriana Mavignier is an architect and landscaper, graduated from the University of Fine Arts of São Paulo. In the market for more than 25 years, she develops solutions that reduce and maximize the environmental impact. In order to save natural resources and create multi-use areas she integrates the project to the surrounding fauna and flora.

She applies the "GreenOne" concept based on the use of sustainable strategies that save resources. The final objective would be to promote "a new way of thinking about projects", applying in the drawings "A new consciousness to reconnect nature and its cycles".

The office executes projects that incorporate the architecture, engineering, interior design, landscaping, automated irrigation, lighting and automation among others. Professionals and qualified partners, trained to attend demanding clients, form the team providing high standard services. Among its projects are public squares, parks, public-private foundations, commercial areas, residential, condominiums, in addition to transplanting trees and large species. The projects are developed with customized, coherent and innovative solutions. Allied to this, functionality, warmth, aesthetics, harmony and sustainability.

The office also designs outdoor objects and furniture collaborating with renowned designers in the national and international market.

Exhibitions: CASACOR, Mostra Amazônia, Ilhabelabitare, Bela Flora and Fia Flora.

"There is no unique style of project. The creation process occurs singularly in each new location. Each project is born with its own unique characteristics, through the observation of its environment and its needs. Whether it is a residence, a balcony or a square, each place tells a story. From there, ideas flow, from the sensitivity of perceiving excesses and faults, and finding the balance. The creativity that transforms is born." says Adriana."
